idk wat i was supposed to do with these

Good kit for the chem kids. Easy to put together

I got this for my O-Chem class and proceeded to rarely use it. There are modeling things online that are quicker and easier to use than these. I know they were really helpful to some of my friends, but I found them frustrating and I didn't learn extra from them. If you would rather play with something in your hands than manipulate it online they might be good for you, but maybe share them with a few friends instead of buying one just for yourself.

If you are taking Organic Chemistry, this kit will really help you out. You can build pretty much any molecule you'll need for the class. Downside, it only gives you three flexible pieces for ring structures. Thus, when making bicycloalkanes, it can stretch the normal pieces (if you're not careful, they could break). Other than that, it'll suit your needs for most anything.

I used this for school and everything was included and lasted for 2 years of Chemistry! Great buy!

Excellent

This model was not what I expected in that it came with a "fold-your-own cardboard box" which is poorly constructed with fold creases that make no sense due to the placement of the cardboard pieces so it is now lopsided... also other model kits that cost the same amount comes with a plastic box that allows you to sort/position the pieces whereas this model kit was a cardboard box where you just dump the pieces into it which also does not allow space to put the instruction manual/other paper it came with into the box. In summary, it is very disorganized in terms of how one is expected to carry the kit from place to place and efficiently create models.

I did not even want to buy these. This was required for a class. I got the product on time which was good, but the model kit itself is not so great for what it was intended for. But I definitely got what I paid for.
