Rocks: A Very Short Introduction (Very Short Introductions)

Synopsis

Rocks, more than anything else, underpin our lives. They make up the solid structure of the Earth and of other rocky planets, and are present at the cores of gas giant planets. We live on the rocky surface of the planet, grow our food on weathered debris derived from rocks, and we obtain nearly all of the raw materials with which we found our civilization from rocks. From the Earth's crust to building bricks, rocks contain our sense of planetary history, and are a guide to our future. In this Very Short Introduction Jan Zalasiewicz looks at the nature and variety of rocks, and the processes by which they are formed. Starting from the origin of rocks and their key role in the formation of the Earth, he considers what we know about the deep rocks of the mantle and core, and what rocks can tell us about the evolution of the Earth, and looks at those found in outer space and on other planets.

ABOUT THE SERIES: The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area. These pocket-sized books are the perfect way to get ahead in a new subject quickly. Our expert authors combine facts, analysis, perspective, new ideas, and enthusiasm to make interesting and challenging topics highly readable.

Book Information

Series: Very Short Introductions

Paperback: 144 pages

Publisher: Oxford University Press; 1 edition (December 1, 2016)

Language: English

ISBN-10: 0198725191

ISBN-13: 978-0198725190

Product Dimensions: 6.7 x 0.4 x 4.4 inches

Shipping Weight: 4.2 ounces (View shipping rates and policies)

Customer Reviews

Dr. Jan Zalasiewicz is Professor of Palaeobiology at the University of Leicester, having previously worked at the British Geological Survey. A field geologist, palaeontologist and stratigrapher, he teaches various aspects of geology and Earth history to undergraduate and postgraduate students, and is a researcher into fossil ecosystems and environments across over half a billion years of

geological time. He has published over a hundred papers in scientific journals and is the author of several books for OUP, including *The Earth After Us* (2008), *The Planet in a Pebble* (2012) and, with co-author Mark Williams, *The Goldilocks Planet* (2012) and *Ocean Worlds* (2014).
