Food Systems In An Unequal World: Pesticides, Vegetables, And Agrarian Capitalism In Costa Rica (Society, Environment, And Place)

Synopsis

Pesticides, a short-term aid for farmers, can often be harmful, undermining the long-term health of agriculture, ecosystems, and people. The United States and other industrialized countries import food from Costa Rica and other regions. To safeguard the public health, importers now regulate the level and types of pesticides used in the exporters' food production, which creates a "regulatory risk" for the export farmers. Although farmers respond to export regulations by trying to avoid illegal pesticide residues, the food produced for their domestic market lacks similar regulation, creating a double standard of pesticide use. *Food Systems in an Unequal World* examines the agrochemical-dependent agriculture of Costa Rica and how its uneven regulation in export versus domestic markets affects Costa Rican vegetable farmers. Examining pesticide-dependent vegetable production within two food systems, the author shows that pesticide use is shaped by three main forces: agrarian capitalism, the governance of food systems throughout the commodity chain, and ecological dynamics driving local food production. Those processes produce unequal outcomes that disadvantage less powerful producers who have more limited choices than larger farmers, who usually have access to better growing environments and thereby can reduce pesticide use and production costs. Despite the rise of alternative food networks, Galt says, persistent problems remain in the conventional food system, including widespread and intensive pesticide use. Facing domestic price squeezes, vegetable farmers in Costa Rica are more likely to supply the national market with produce containing residues of highly toxic pesticides, while using less toxic pesticides on exported vegetables. In seeking solutions, Galt argues for improved governance and research into alternative pest control but emphasizes that the process must be rooted in farmers' economic well-being.

Book Information

Series: Society, Environment, and Place

Hardcover: 304 pages

Publisher: University of Arizona Press; 2 edition (March 27, 2014)

Language: English

ISBN-10: 0816506035

ISBN-13: 978-0816506033

Product Dimensions: 1.2 x 6 x 9.5 inches

Shipping Weight: 1.2 pounds (View shipping rates and policies)

Customer Reviews

“Forms a part of and provides an important critical moment within a new wave of scholarship that speaks to the rise of quality-defined national and international markets.”
•Tad Mutersbaugh, University of Kentucky
“Using Costa Rican farmer surveys, archival data, and a political ecology framework, Galt carefully teases out the relations between local agro-ecologies, multiple markets, public policies, and pesticide use to provide a fine-grained perspective on these paradoxes.”
•Agriculture and Human Values
“Diving into the large technical variability in pesticides may lead to tedious reading, but Galt succeeds extraordinarily well in introducing the reader to the material complexity of the issue, by explaining the technical aspects bit by bit without distracting the reader from the larger story.”
•AAG Review of Books
“Offers an important contribution to the political ecology approach as it shifts political ecology’s predominant focus on subsistence agriculture to a more industrialized agriculture practiced by small-scale family farmers.”
•Economic Geography

Ryan E. Galt is an associate professor in the Department of Human Ecology at the University of California, Davis, where he is also a Provost Fellow of the Agricultural Sustainability Institute.
