Geomorphology

Synopsis

This book provides a detailed coverage of the landforms of Planet Earth and the processes that shaped them. The study of these morphologies, some of which formed during past geological periods under environmental conditions very different from those of today, makes it possible to reconstruct the evolution of relief and to infer environmental changes that have involved geological media, the climate, or human activity. A major advance of Geomorphology in recent decades is the development of techniques that make it possible to quantify morphogenetic processes and rates at which forms change under different environmental conditions. The development of Geochronology, or absolute dating methods, is helping us correct the limitations of relative dating that have prevailed in Geomorphology for many years. The ability to assign numerical ages to both landforms and deposits opens up multiple possibilities for reconstructing the evolution of relief, making correlations, calculating rates, and estimating recurrence periods. A theme of major concern facing people today is the possible warming of the planet due to the release of greenhouse gases into the environment. Investigations conducted by the scientific community show that this temperature increase is at least partially anthropogenic. Given this more-than-probable cause and effect relationship, the most sensible and prudent path is to design and apply mitigation measures to alleviate this heating that can negatively affect both the natural environment and human society. The information that Geomorphology can provide on the recent past (Historical Geomorphology) may be very useful in making predictions on the activity of these potentially dangerous processes in the future and on the possible effects of environmental changes. The aim of this book is to provide a general vision of the multiple aspects of Geomorphology and to provide a methodological foundation to approach the study of various branches of geomorphology. To this end, the book contains a basic bibliography that can be used for future research. In addition, applied aspects of Geomorphology are covered at the end of each chapter to provide knowledge of the activities of geomorphologists in the professional world.

Book Information

Paperback: 1014 pages

Publisher: CRC Press; 1 edition (December 9, 2012)

Language: English

ISBN-10: 0415595339

ISBN-13: 978-0415595339

Product Dimensions: 10.8 x 8.6 x 1.8 inches

Shipping Weight: 6.2 pounds (View shipping rates and policies)

Customer Reviews

Mateo Guti rrez Elorza, Emeritus Professor of Geomorphology at the Science Faculty of Zaragoza University   served as   vice-director of the Teruel University College and managed post-doctoral courses in the Sao Paulo University (USP-Brazil) and San Juan University (Argentina). He was the First President of the Spanish Society of Geomorphology (1987-1990), and he is currently Corresponding Academic of the Real Academia de Ciencias Exactas, F sicas y Naturales de Madrid (since 1992) and   member of the Real Academia de Ciencias Exactas, F sicas, Qu micas y Naturales de Zaragoza (since 1996). Professor Guti rrez was member of the IAG Executive Committee (2001-2005) and the main organizer of the 6th International Conference of Geomorphology held in Zaragoza (2005). He has published four books: Geomorfolog a de Espa a (1994), Rueda. Madrid; Geomorfolog a Clim tica (2001), Omega, Barcelona; Climatic Geomorphology (2005), Elsevier, Amsterdam;   and Geomorfolog a (2008) Pearson/Prentice Hall. He is also the author of more than 200 papers in journals of the SCI and other publications. His scientific work is mainly focused on karst and geomorphology in arid regions.
